

## Submission of Manuscript

Authors are invited to submit their manuscripts electronically through Journal's email address (submit@pharmaresearchbulletin.com) along with a covering letter preferably by the corresponding author or first author. Each manuscript will be provided with a manuscript ID and all correspondence is done through e-mail. Please always refer to the manuscript ID for any further enquiries.

## Organization of Manuscript

Manuscripts must be prepared in accordance with "Uniform requirements for Manuscripts submitted to Biomedical Journal" developed by International Committee of Medical Journal Editors (ICMJE).

Manuscript should be typewritten in Times New Roman, 12 font size, double-spaced, with margins of at least one inch on all sides. Pages should be numbered consecutively, starting with the title page and the matter arranged in the following order:

- Title page
- Abstract
- List of abbreviations used or Keywords
- Introduction
- Materials and Methods
- Results
- Discussions
- Conclusions
- Acknowledgments
- References
- Tables and Figures along with caption and legends

- a) **Title Page:** Title page contains title of the manuscript in bold face, title case (font size 14), names of the authors in normal face, title case (font size 12) followed by the address of authors in normal face, lower case (font size 12). Names of the authors should appear as initials followed by surnames. Full names may be given in some instances to avoid confusion. Followed by the author names, please provide the complete postal address or addresses with pin code number of the place(s), where the research work has been carried out. If the publication originates from several institutes, the affiliation of each author should be clearly stated by using superscript Arabic numbers after the name and before the institute. The author to whom correspondence should be directed must be indicated with an asterisk. At the bottom left corner of this page, please mention "\*\*For correspondence" and provide a functional e-mail address of the corresponding author to whom all correspondence (including galley proofs) is to be sent.

- b) **Abstract** - Abstract should be clear and concise to convey the manuscript in advance along with the significance of the work to a broad audience. Above all, the abstract ought to contain a quick background of the question(s), an outline of the results while not in depth experimental detail, and an outline of the importance of their findings. Abstracts should be limited to 300 words or less.

**List of abbreviations used or Keywords** - Up to 4-6 keywords must be provided in alphabetical order. These keywords should be typed at the end of the abstract.

- c) **Introduction** - The introduction should provide a transparent statement of the study, the relevant literature on the study subject along with the planned approach or resolution. This should be general enough to draw in a reader's attention from a broad array of scientific disciplines. It should be started in a separate page after keywords
- d) **Materials and Methods** – It shall be started as a continuation to introduction on the same page. The materials section should include the detailed descriptions of all types of materials used. Methods part should contain sufficient detail so that all procedures can be replicable by other researchers. Authors may divide this into subsections if several methods are described. The methodology should be precise but with sufficient detail to guide scientific replicability. The statistical method and the level of significance chosen shall be clearly stated.
- e) **Results** – The result section should describe the outcomes and findings of an article (research, case study, review etc.). It should be clear, comprehensible and concise (using figures & tables). The layout of the result section should be in the same order in which the introduction and material and methods section is being structured.
- f) **Discussions** – This section should point out the significance of the results in relation to the reasons for doing the work. It should include the strengths and limitations of the study. The discussion should state the scope of the results, which need to be further explored. Results and discussion of the work can also be combined under one section, Results and Discussion.
- g) **Conclusions** - Concisely summarizes the principal conclusions of the work and highlights the wider implications. This section should not merely duplicate the abstract.
- h) **Acknowledgments** – Here you can include sources of funding, grants, details about anyone who contributed substantially towards the study etc.
- i) **References** - Only published or accepted manuscripts should be included in the reference list. Meetings abstracts, conference talks, or papers that have been submitted but not yet accepted should not be cited. References should be numbered consecutively in the order in which they are first mentioned in the text. Identify references in text, tables, and legends by Arabic numerals in parentheses.

All the references must be in the following order:

## Articles in Journals

Beyger JW and Nairn JG. Some Factors Affecting the Microencapsulation of Pharmaceuticals with Cellulose Acetate Phthalate. *J. Pharm. Sci.* 1986; 75 (6):573–578.

## Books and Other Monographs

### *Personal author(s)*

Murray PR, Rosenthal KS, Kobayashi GS, Pfaller MA. *Medical microbiology*. 4th ed. St. Louis: Mosby; 2002.

### *Editor(s), compiler(s) as author*

Gilstrap LC 3rd, Cunningham FG, VanDorsten JP, editors. *Operative obstetrics*. 2nd ed. New York: McGraw-Hill; 2002.

### *Author(s) and editor(s)*

Breedlove GK, Schorfheide AM. *Adolescent pregnancy*. 2nd ed. Wiecezorek RR, editor. White Plains (NY): March of Dimes Education Services; 2001.

### *Chapter in a book*

Meltzer PS, Kallioniemi A, Trent JM. Chromosome alterations in human solid tumors. In: Vogelstein B, Kinzler KW, editors. *The genetic basis of human cancer*. New York: McGraw-Hill; 2002. p. 93-113.

### *Patent*

Pagedas AC, inventor; Ancel Surgical R&D Inc., assignee. Flexible endoscopic grasping and cutting device and positioning tool assembly. United States patent US 20020103498. 2002 Aug 1.

- j) **Tables:** Tables capture information concisely and display it efficiently; they also provide information at any desired level of detail and precision. Including data in tables rather than text frequently makes it possible to reduce the length of the text. Give each column a short or an abbreviated heading. Authors should place explanatory matter in footnotes, not in the heading. Explain all nonstandard abbreviations in footnotes, and use symbols to explain information if needed. Symbols may vary from journal to journal (alphabet letter or such symbols as \*, †, ‡, §), so check each journal's instructions for authors for required practice. Identify statistical measures of variations, such as standard deviation and standard error of the mean. If you use data from another published or unpublished source, obtain permission and acknowledge that source fully.
- k) **Figure:** Figures should be on separate pages but not inserted with in the text. Figures should be numbered consecutively according to the order in which they have been cited

in the text. Each figure must be accompanied by a legend explaining in detail the contents of the figure and are to be typed under the figures. Graphs and bar graphs should preferably be prepared using Microsoft Excel and submitted as Excel graph pasted in Word. Alternatively photographs can be submitted as JPEG images. If a figure has been published previously, acknowledge the original source and submit written permission from the copyright holder to reproduce it. Permission is required irrespective of authorship or publisher except for documents in the public domain.

l) **Units of Measurement**

Measurements of length, height, weight, and volume should be reported in metric units (meter, kilogram, or liter) or their decimal multiples. Temperatures should be in degrees Celsius. Blood pressures should be in millimeters of mercury.
